

CLIMBER PADS

3126

A traditional style "L" pad with many benefits – thicker stronger padding to hold the memory and a rounded edge to prevent chafing. A heavier pad but more comfortable than a traditional "L" pad.

35032

The "C" wrap pad has an angled steel insert to eliminate excessive side movement of the climber shank. The pad is durable leather and is lined with felt. This pad will fit Buckingham and Bashlin climbers only. For Klein climbers order 35032KL. The minimum climber strap length to secure Model 35032 is 24".

3124

"T" shaped climber pad. 5/8" thick felt is sewn to the back side for added comfort. The tunnel design helps keep the shank and straps in place. Requires one pair of 26" straps to secure to leg.

3125

The climber shank and sleeve is inserted into the tunnel pad to provide extra support where the climber needs it most. This pad is made of premium leather for those who want the best in a traditional-style pad.

3127

The 3127 pad eliminates rivets entirely. Its 9" width and its thick felt padding make it one of the most comfortable leather pads on the market. It has a rolled edge that helps to eliminate rubbing and chafing. Requires two 26" straps to secure pad and climber to leg.

3122

Our original traditional "L" pad. For comfort, 3/4" thick foam is sewn between the finest top grain liner leather and top grain side leather available. Brass rivets are used to attach climber strap and shank loops to pad for added durability.
